

Made up of 16 facets of star shape

Kids love this new design!

16 facets can reduce the contact surface between pieces, which greatly reduces the scratch problem during the shipment

No sales concerns with this patent design

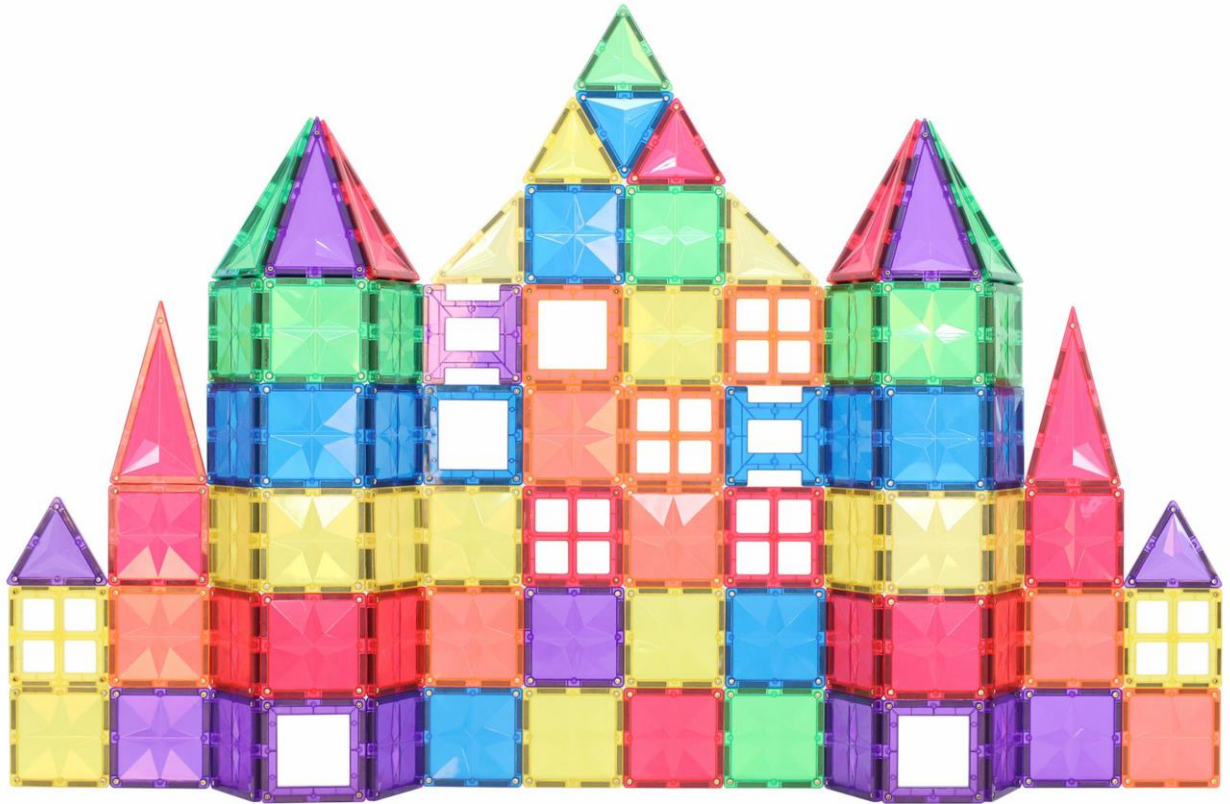

This ABS plastic has high temperature resistance, low temperature resistance, and impact resistance. So it can well maintain the characteristics of the products.

**We use new imported,
premium, non-toxic and
food-grade *ABS* plastic**

**No return material and no impurities
make our product
more transparent and the color more vivid**

**Kids could build bigger and more stable models with our bigger magnet
But easier to collapse with regular magnet**

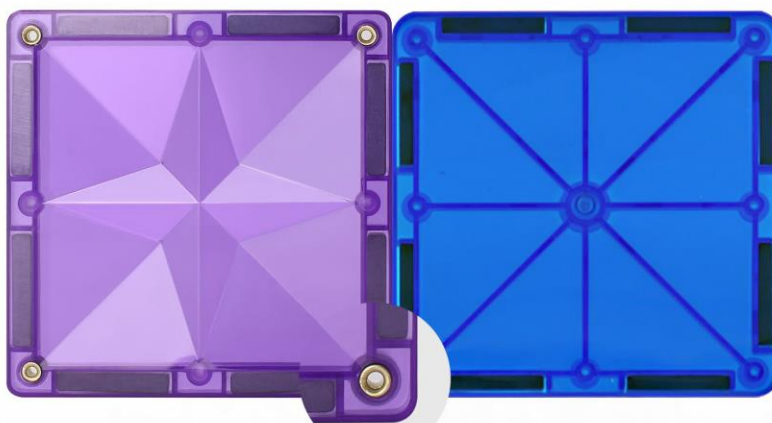

We adopt upgraded bigger size of magnet :

22*4*5mm

Most suppliers in the market use the regular size of magnet: 20*3*5mm

<Here are pictures for comparison>

Our star tiles have **rivets** embedded in each corner, some of other supplier do not have rivets

The advantage with rivets:

A: Prevent internal parts from falling off and being swallowed by children
(This is a serious situation)

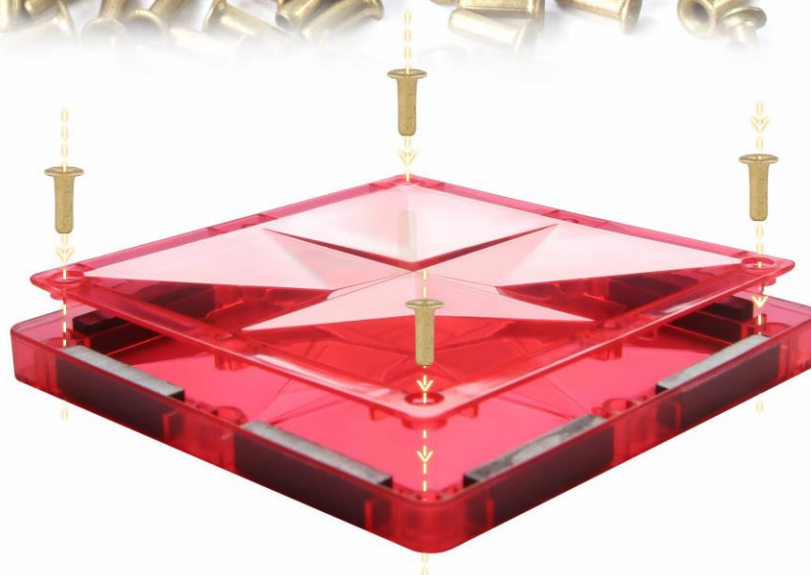

B: The tiles will not be easily broken and the piece will not be separated if the tiles falls off when the kid is playing

Our rivets are made of copper, not ferrum (easy to rust) and aluminum (easy to fall off).

- The advantages of copper rivets:

Hard to rust. More stable after ultrasonic welding

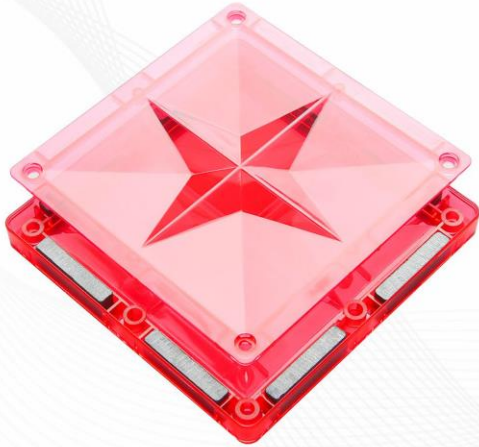

Rivets are inspected one by one by our workers.
We focus on every step to ensure the quality of our products

No glue ultrasonic welding technology

— Non-toxic and environmental

The smoother surface makes our tiles more transparent and beautiful

No burrs in the surface, protect kids' hands from being scratched while playing

Tiles are more firmly with 2 pieces of semi-finished tiles by ultrasonic welding
